RACIAL FACTS ABOUT AIDS

by J. B. Stoner

"And ye shall know the truth, and the truth shall make you free."

St. John 8:32-48

To understand the racial disease of Aids, we must be aware that there is a cover-up. Very little freedom of speech is allow ed in regard to the facts of Race. That is especially true in regard to facts about a racial disease that is devastating both the jews and the negroids. Does anybody really think that the jew power structure would ever allow the federal Centers for Disease Control (C D C) to list jews and negroids as Aids-prone high risk groups? Since the racial facts of Aids are suppressed, we must and do acquire those facts anyhow from both leaks and from research.

AIDS IS NOT NEW

The newsmedia and others lie when they say that Aids is a new disease. Aids is a child of Kaposi's sarcoma cancer which has been discussed in medical literature for over one hundred years, ever since 1872. W.B. Saunders Company, Philadelphia, Pa., is the large est publisher of medical books in the United States. In 1985, it published CONN'S CURRENT THERAPY. As you know, most people with Aids die from other causes before Aids itself kills them. In this book on page 626 it says that most Kaposi's sarcoma patients die of other causes. On page 627 it says that Aids is a recently recognized variant of Kaposi's sarcoma. This book points out that the variant entity, Aids, unlike regular Kaposi's sarcoma, is more dead ly and has a high mortality rate. Basically, they both destroy a body's immune system.

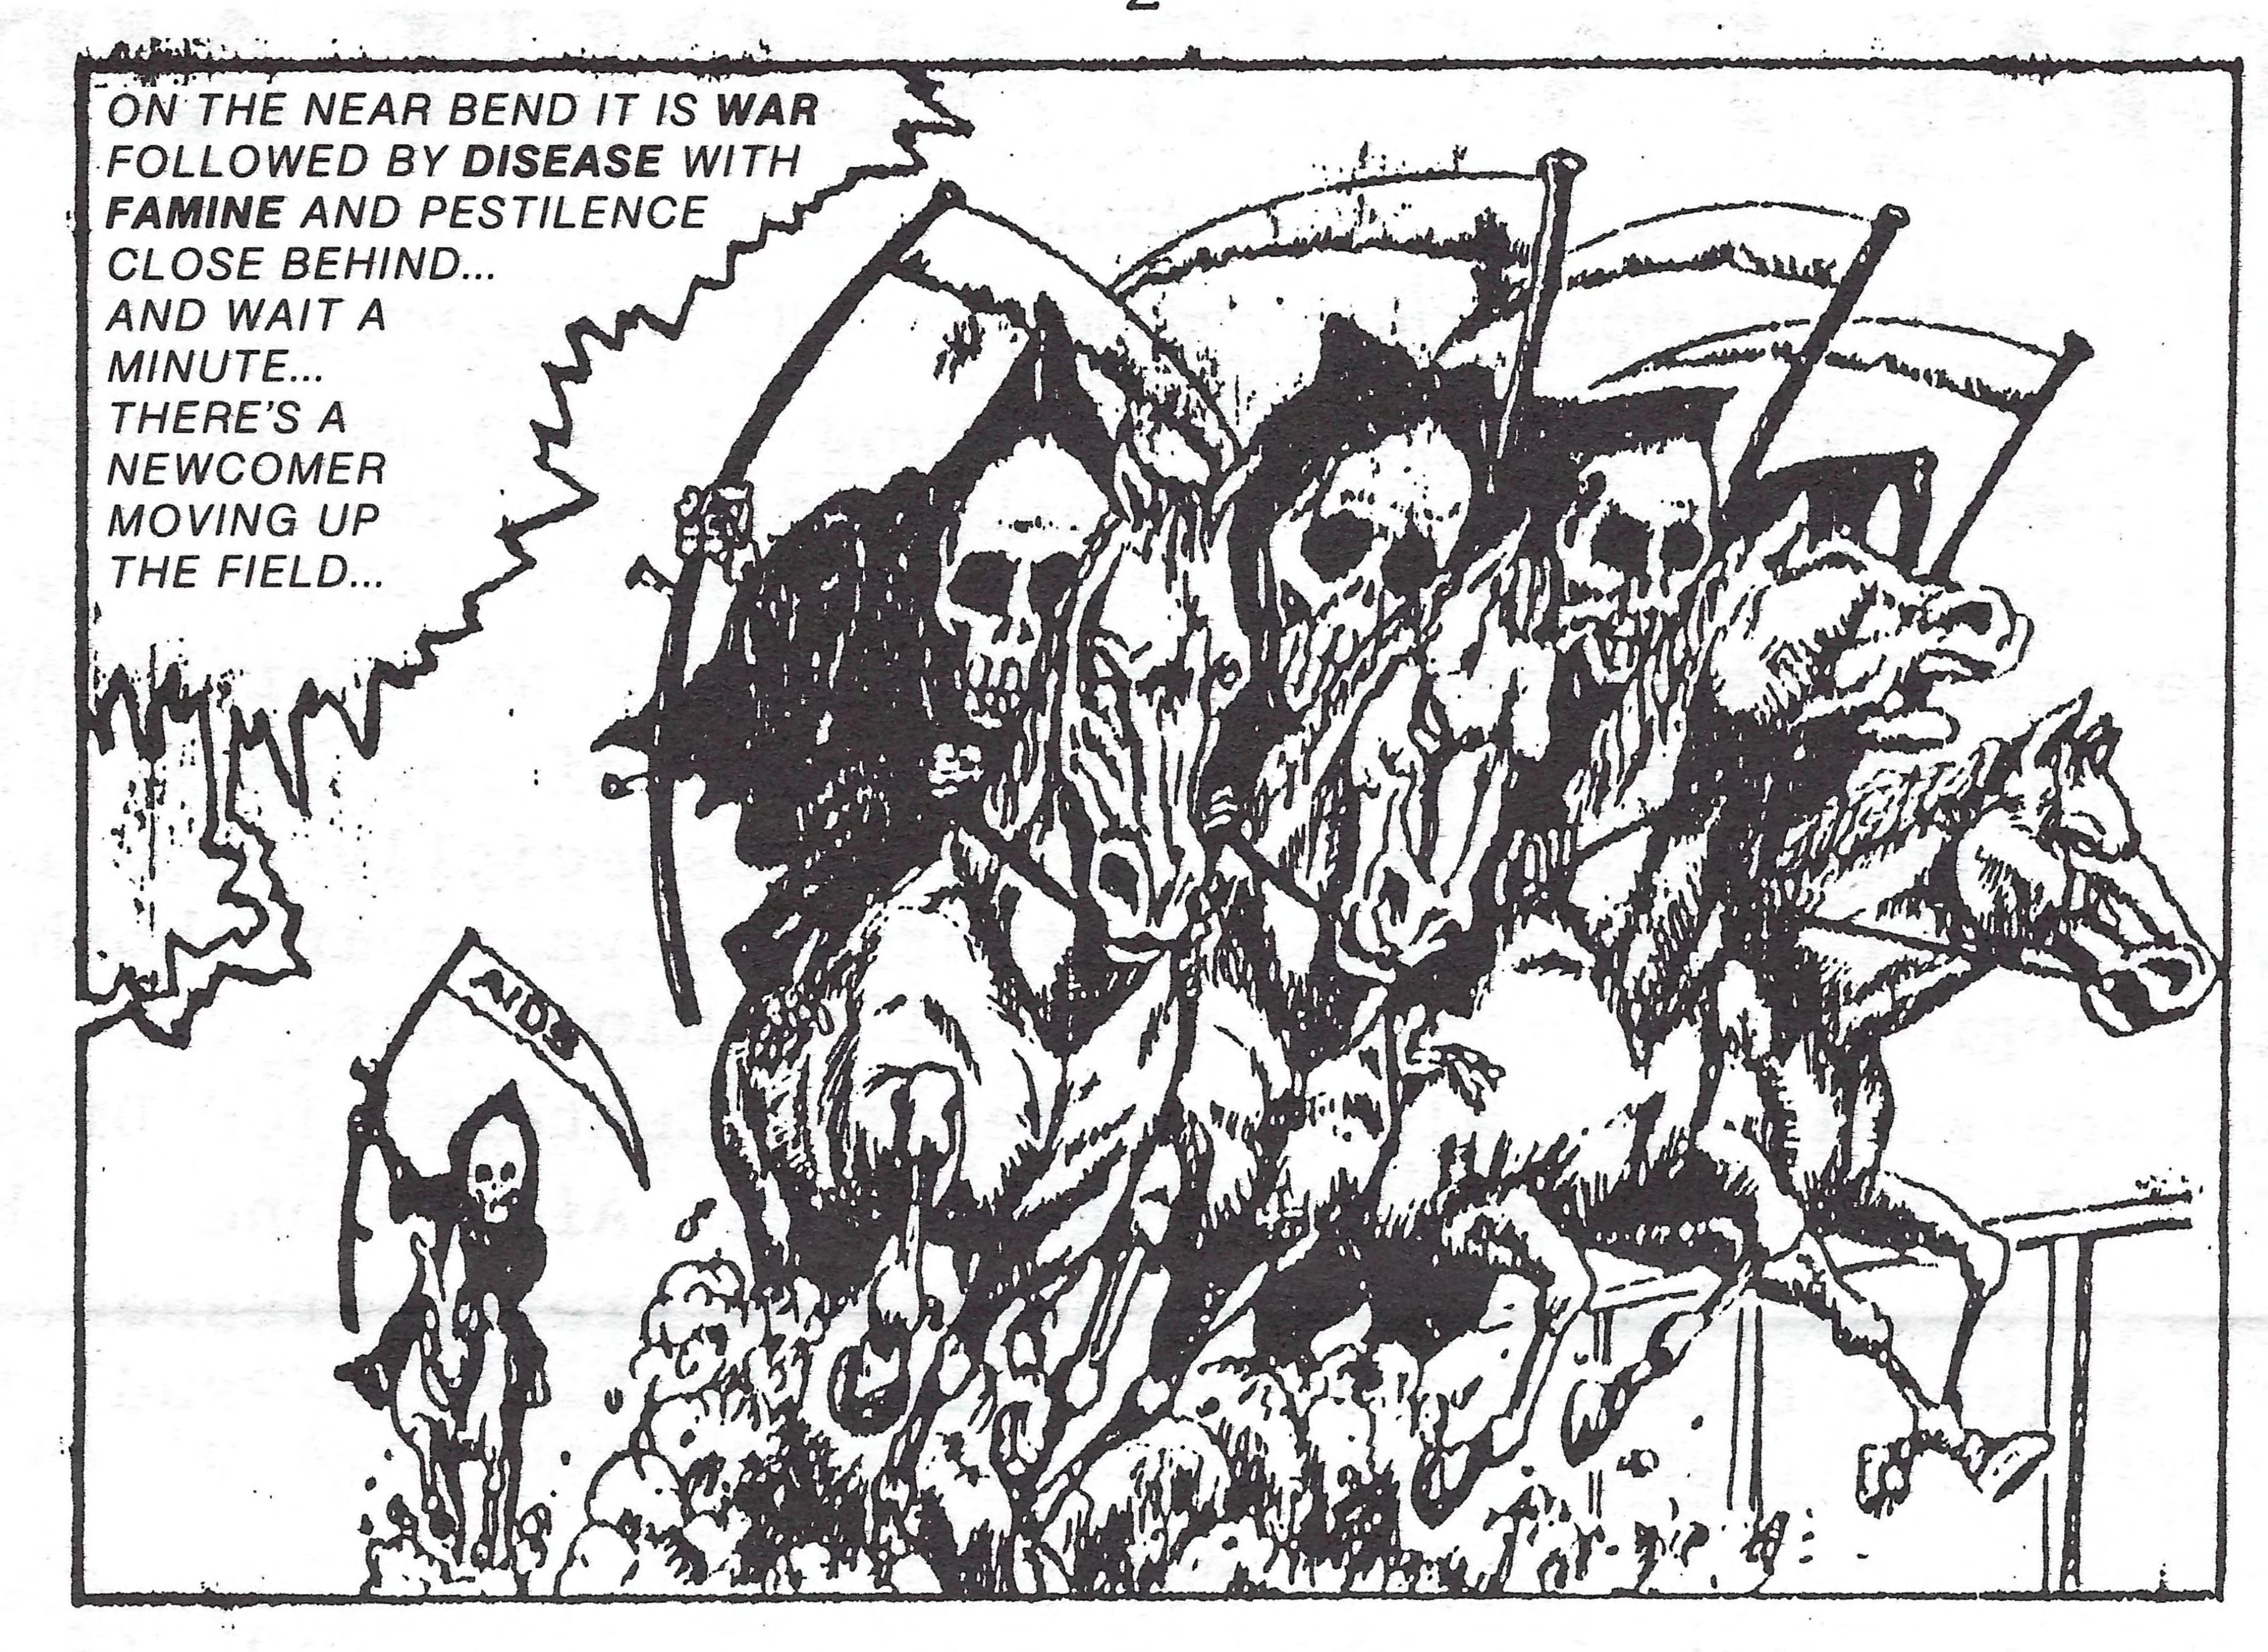

AIDS IS A CANCER VIRUS

About any medical dictionary or medical book will tell you that Kaposi's sarcoma is a cancer. The variant of Kaposi's sarcoma known as Aids is also a cancer virus. Yes, most cancers are not known to be contagious, but Aids is one of the few contagious cancers. Why does the jew-controlled newsmedia mostly conceal the fact that Aids is a cancer virus?

On February 12, 1985, PBS television broadcast a documentary on Aids that was transcribed as a booklet and sold by WGBH Transcripts, Boston, Mass. If still available, buy a copy. On page 20 of the transcript, then U.S. Secretary of Health and Human Services, Margaret Heckler, said: "The probable cause of Aids has been found. A variant to the human cancer virus called HTLV-III." Yet, the newsmedia continues to black out the fact that Aids is a cancer virus. HTLV-III is the cancer virus that causes Aids and the destruction of the immune system.

The Horse Race

The Aids Horse will pass the others

Medical Book Reveals Facts

One of the best medical books about Aids was published in 1984 entitled AIDS, A BASIC GUIDE FOR CLINICIANS, price \$55. per copy, by W.B. Saunders Company, Philadelphia and is well worth the price. Buy these medical books through your local book dealer so you can see how the newsmedia is hiding the forbidden facts. Of course, remember that all medical literature is written in low key medicalese.

AIDS, A BASIC GUIDE FOR CLINICIANS was written for the benefit of doctors who must deal with Aids patients. On Page 123 it talks about the term Aids being "coined." The book does not say why it was coined, but the obvious reason was to conceal its racial nature, especailly its jewish nature. This book says that when there was an outbreak of Kaposi's sarcoma (KS) appearing, at that time mostly in homosexual males, the term "AIDS" was "coined" to describe it. The book also admits that other groups, such as Haitians, are suffering from this newly "coined" entity.

This book also reveals that during the past three decades prior to 1984, "an increased prevalence of Kaposi's sarcoma (KS) was noted in Equatorial Africa." That was mostly prior to the mutation of Kaposi's sarcoma into what is now known as Aids, even though old style Kaposi's sarcoma continues to increase in Africa as it strikes more young Africans according to the N.Y. Times, page 1 of Dec. 9, 1985

The history of Kaposi's sarcoma in Africa is that it only infected negroids and jews and not Whites who lived in the same vicinity. Medical reports have been written about KS in Africa as far back as 1957 by the Belgian Medical Society. For several decades before 1981, doctors were studying cases of Kaposi's sarcoma.

Why? Why? Why?

Why should facts about Aids/KS be mainly confined to medical books and be kept secret from the people of this country and the world?

AIDS, A BASIC GUIDE FOR CLINICIANS, on page 123, relates the fact that Dr. Moris (Moritz) Kaposi, a famous dermatologist in Vienna, first described the disease that is now named after him. It states the fact that:

"For over half a century after Kaposi's original description, the literature was mainly concerned with the clinical and pathologic aspects of the disease and its epidemiology in Europe, especially in Eastern European (Ashkenazic) Jews." Remember, that this is a pro-jewish medical book that is admitting these facts.

Research shows that about 87% of the world's jews are Ashkenazic jews and over 95% of the jews in the United States and Canada are Ashkenazic jews who originated in Eastern Europe.

Then, after being confined to jews for over half a century, the jews apparently traveled to Africa and gave Kaposi's sarcoma(KS) to the negroes there. Now the jews are trying to falsely say that Aids originated in Africa and put the blame on the poor negroes so as to conceal the fact that it originated among the jews.

KS/Aids Changed, It Mutated

Since Aids is a variant, that is, a mutation of Kaposi's sarcoma, the jew-controlled newsmedia lies when it says that Aids is new. KS and its child, Aids, have been around at least since 1872. The only thing new is the mutation. The newly "coined" name of Aids in 1981 is when the big cover-up started so as to conceal the fact that it is a racial disease of jews and negroids. A more honest name would be "Enhanced Kaposi's sarcoma." Why is it that the corrupt Washington politicians and the newsmedia too often first think of covering up the facts when the truth would would serve them better? People have a legal and constitutional right to the facts. This brochure is an effort to make the true facts known to the public. Please let others read it.

Since Kaposi's sarcoma was a jewish disease over one hundred years ago, is it now? Have jewish hereditary genes changed since then? Racial genes don't change that fast. The fact that the mutation of Kaposi's sarcoma (KS) known as Aids is hitting jews hard at the present time is evidence that jewish racial genes have not changed and that there is a big cover-up. The American people and others need to know these facts.

The jews refuse to allow the U.S. Government to take a census of jews and they compel the Census Bureau to accept figures given to them by jewish organizations. That way, they conceal the large number of jews in the United States. Also, the jew power structure is so powerful that it does not allow the CDC or anybody else to keep statistics on how many jews have Aids. Such is forbidden and they keep those important facts hidden from the public.

Facts Continue Coming To Light

The weekly National Jewish Post and Opinion is published in Indianapolis, Indiana. On December 24, 1986 it had an article on its front page in which it related that while she was in a debate with other rabbis, Rabbi Janet Marder of California had "sought to make the point that AIDS is a Jewish issue. Rabbi Marder is to be complimented on her honesty about Aids, but why did the public newsmedia suppress such candor that was highly important news? Why is it suppressed news? Why? Why?

Facts do slip out. On page 3 of the N.Y. Daily News of Friday, July 10, 1987, it was said that: "No one knows the number, but substantial numbers of Jews have died of Aids." Sensational and honest, but why is the rest of the newsmedia suppressing such highly important news? Since the N.Y. Daily News is pro-jewish and loves the jews, nobody can doubt the facts that are admitted in their article.

A Basic Guide for Clinicians:

A. 123

Below is a photo copy of part of page 123 of the above-entitled book as documentary proof of facts cited from that authoritative book which confirms what earlier books have said. Through your local book dealer, buy that book and learn more about KS/AIDS. Get a copy before it can be censored.

CHAPTER 9

Histopathology of Kaposi's sarcoma and other neoplasms

In 1872, Moris Kaposi, the renowned Viennese dermatologist, described a disease that now bears his name (1). He initially termed the entity "Multiple idiopathic hemorrhagic sarcoma". In his original description the disease presented as red-blue nodules predominantly on the lower extremities. The 3 patients described were all adult males and died within 3 years of diagnosis. Histologically the lesions exhibit proliferation of vessels, hemorrhage and hemosiderin pigment deposition. For over half a century after Kaposi's original description, the literature was mainly concerned with the clinical and pathologic aspects of the disease and its epidemiology in Europe, especially in Eastern European (Ashkenazic) Jews.

The past three decades have seen remarkable and rather startling epidemiologic and etiologic observations in this previously rare disorder. An increased prevalence of Kaposi's sarcoma (KS) was noted in Equatorial Africa (2). A compilation of the work of many investigators on this subject is found in a monograph published

after a symposium on KS which was held in Kampala, Uganda in 1961 (3).

The next important epidemiologic observation consisted of reports of KS in patients with immunodeficient states either due to immunodeficient disorders such as lupus erythematosus or as a result of immunosuppressive therapy such as kidney transplant recipients (4-10).

In the past 3 years an outbreak of KS appearing mostly in homosexual males has been observed (11-15). The term Acquired Immunodeficiency Syndrome (AIDS) has been coined to define this entity that, although most commonly seen in homosexual males, is also seen in IV drug abusers, hemophiliacs (16), and Haitians (17). KS associated with AIDS is frequently complicated with opportunistic infections such as *Pneumocystis carinii* pneumonia.

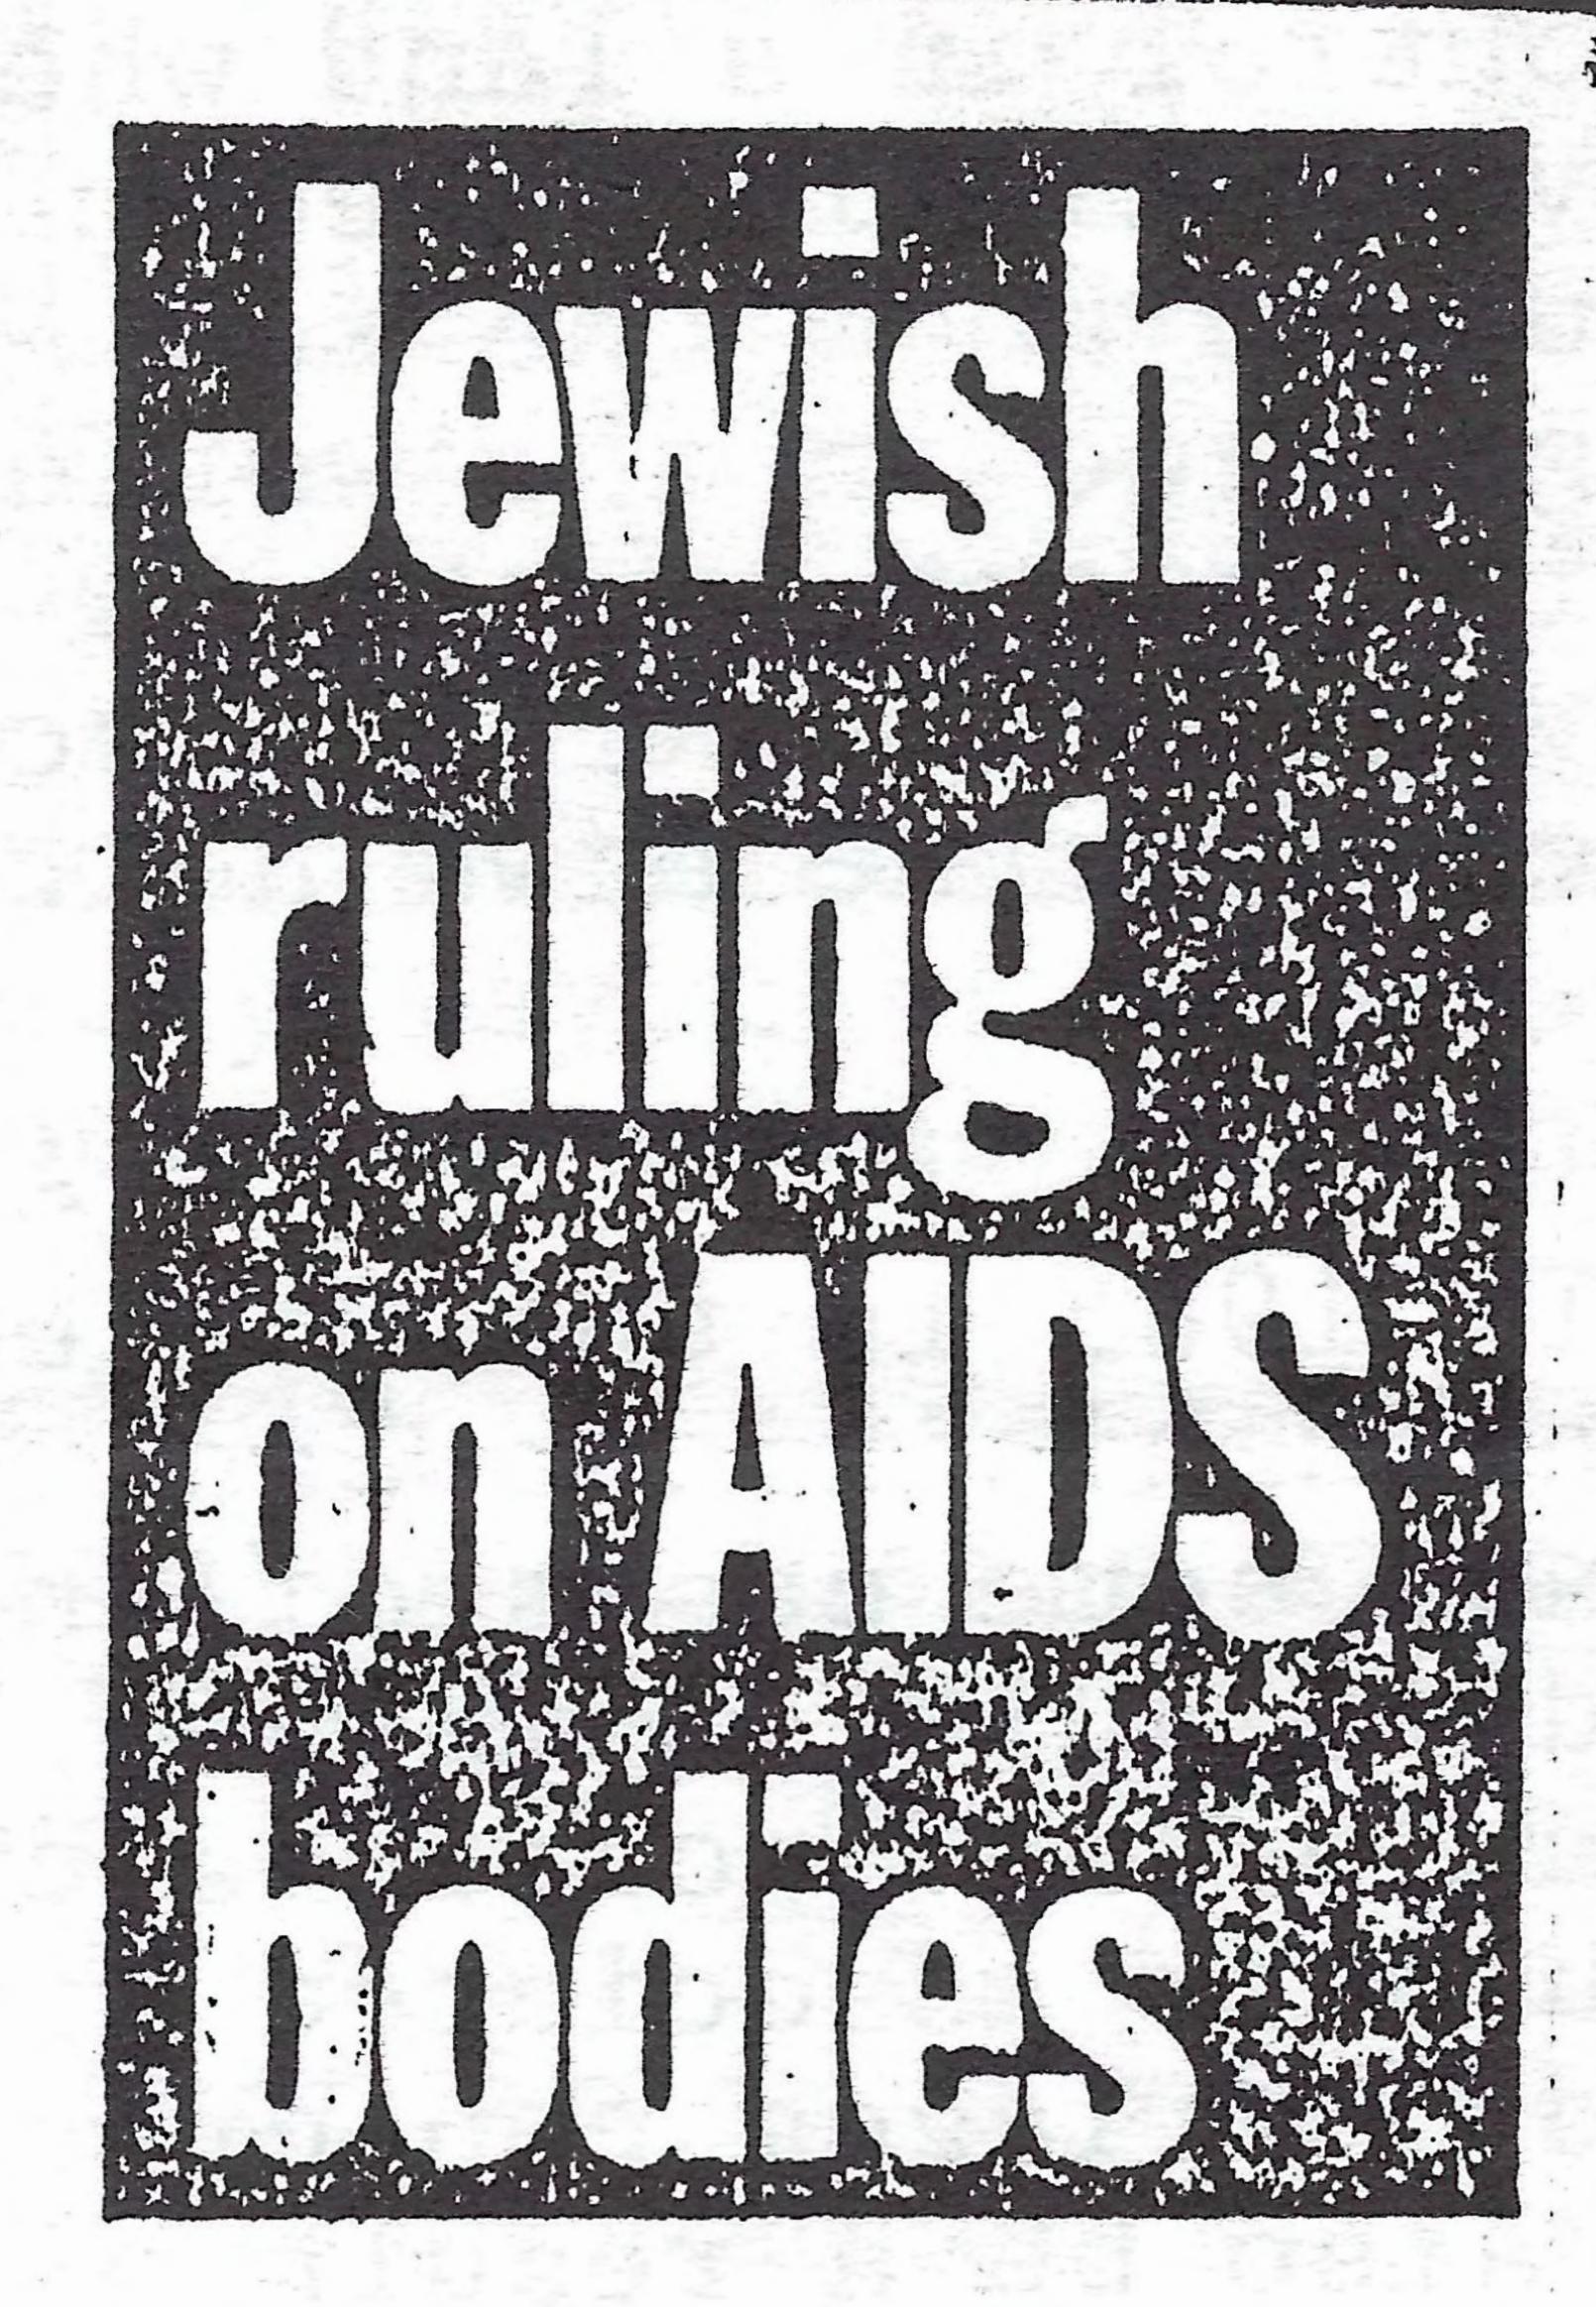

Rate of AIDS for Hispanics, blacks higher

The rate of AIDS cases is more than three times as high among blacks and Hispanics as it is in the of the population, searchers reported Thursday.

In its weekly public health report, the national Centers for Disease Control in Atlanta said blacks and Hispanics, who make up approximately 18 percent of the U.S. population, account for nearly 40 percent of the nation's acquired immune desiciency syndrome cases.

CDC officials said the rate of disease among both groups is a sign that efforts to prevent the disease are not reaching minority groups.

"AIDS has been largely perceived as a disease of gay white men." Dr. Harold Jaffe, an AIDS expert at the CDC, said Thursday. "While that's true, it's also true that blacks and Hispanic men, women and children have been disproportionately affected."

By CHARLES W. BELL

Daily Neise Religion Entry

Jewish burial societies have been told that neither religious law nor tradition requires them to wash bodies of AIDS victims—a ruling likely to anger Jews who regard it as an inviolate practice in preparing the dead for buri-

The ruling was made last month and disclosed yester-:

day.

Rabbinical experts at Yeshiva University said the ruling "probably" freed burial societies from two other forms of intimate contact with the dead-trimming of finger and toe nails and combing or cutting of hair.

The ruling by rabbinical Experts in Jewish law came at the request of a rabbi who said members of some burial societies were afraid that contact with AIDS victims might infect them.

"It is a question that every Jewish community is now addressing," said Rabbi Yitzchak Rosenbaum, professor of Jewish law at Yeshiva University, the leading center for Orthodox education in the United States.

"No one knows the number but substantial numbers of Jews have died of AIDS."

Surely, it was only by accident that such a sensational and honest article appeared in that one newspaper, the N.Y. Daily News, or maybe the jewish leaders want the millions of jews in that part of the country to know the racial facts about Aids. Why did that important news fail to appear in any other newspaper in the United States? You know why: jew control in a land where the news is controlled and where we actually have very little freedom of the press, such as this brochure. They don't want us to know the real facts about the most important news event now taking place in the world. Aids is an overriding issue that is one of the most important events in the history of the world and is the most important event now taking place in America and the whole world. Of course, suppressing the news neither slows nor stops the invincible march of Aids.

Aids In Soviet Union

In 1985 in the Soviet Union, Dr. Leonid S. Filarov, chief doctor at the Odzhinikidze Sanatorium in the Black Sea resort of Sochi, said, "We have some cases of this disease and of course it is a problem. It is a difficult situation." Filarov said Soviet doctors were studying the causes and possible cures for the disease. He said some even believed it could be associated with marriages between people of mixed races. "Mixed marriages can create genetic mutations, and it is possible Aids could also be a result of these marriages. We are looking at this possibility," Filarov told journalists this week during a visit to his sanatorium. This report appeared in very few U.S. newspapers and was also reported on radio news by Paul Harvey. Since then, no more has been heard from Filarov. Did he offend the jew rulers of Russia and perish? Most of the jews in the Soviet Union are mixed-breeds. The nations with the most Aids cases are the ones who most adamantly deny having Aids cases.

Negroids and Aids

On March 10, 1987, VILLAGE VOICE weekly in Greenwich Village, New York City quoted the federal Centers for Disease Control, CDC, as saying that a black woman is 13 times more likely than a White woman to contract Aids and a Hispanic woman is at 11 times the risk. That blacks and Hispanics are less than 20 per cent of the population, but make up 39 per cent of Aids cases in the United States.

TIME magazine of April 27, 1987 also quoted the same CDC figures that VILLAGE VOICE had previously quoted. In the TIME article on page 66 Dr. Constance Wofsy is quoted as she criticizes the media for supporting the "misimpression that Aids in heterosexuals is a White disease." Of course, that deception is designed to fool White people into supporting a waste of taxpayers' money to try to find a vaccine or cure for Aids which is impossible and a total waste of money. The jewsmedia also wants billions of tax dollars spent on a horrible program of teaching "safe sodomy" to grammar school children and others. The fact is that Whites have much immunity to Aids so long as they stay away from sodomites and those races that are Aids-prone and their blood and blood products.

White Hispanics Are Safe

Aids is hitting those Hispanics that have negroid blood in them. White Hispanics are a minority among Hispanics, but the Hispanics who are White are as safe as other Whites.

Heterosexual Aids is jewish and negroid and the danger to Whites has been grossly exaggerated, so tell your Senators, Congressmen and state legislators to stop wasting money on useless and futile efforts that will never stop the invincible march of Aids.

AIDS MEANS ZERO POPULATION GROWTH FOR BLACKS

The March 10 Village Voice also quotes a prominent New York doctor as saying: "Because of the high prevalence of infection among women and young children, I see AIDS limiting the black population. Unless we can interrupt transmission somehow, we may be looking at zero population growth for blacks."

He did not say how soon.

On April 16, 1987, ABC Television, on its evening news, amazingly broadcast a prediction that, due to Aids, there would be zero population growth for blacks by 1991.

Naturally, they do not wish to tell the blacks the whole truth which is that Aids will eliminate all negroes and part negroes (negroids) from America, Africa and the rest of the world.

Since the CDC has predicted that, if the rate of contagion is not checked, that by 1991 there may be 130 million who are carriers of the Aids virus, either with or without symptoms. Of those 130 million, 280,000 will have the disease with symptoms. Therefore, since it is a racial disease, the child of Kaposi's sarcoma, how can any negroids or jews survive it?

"AIDS EPIDEMIC THREATENS TO DEPOPULATE MUCH OF AFRICA" was the head line on an article published in the Washington Times on May 28. Among other things the article said: "It is feared that within 10 years the plague could depopulate East and Central Africa...." With regular Aids and similar plagues breaking out all over Africa, if trends continue, there will eventually be no negroes in Africa, but the Times naturally does not let them know that Aids will remove all negroes from Africa. Even so, their report about Aids depopulating much of Africa is important news and confirms other reports.

Easier For Blacks To Catch Aids

Dr Mark Whiteside is the co-director of the Institute of Tropical Medicine in Miami, Florida. While the discredited CDC says that there is no casual transmission of Aids, Dr. Whiteside says that there is. He should know because he treats all of the Aids patients at Belle Glade, Florida which has a higher percentage of Aids patients than any other places in the United States, except for several other South Florida areas that are being kept secret. Dr. Whiteside says that many of the Aids cases in Belle Glade are men and women without the usual risk factors. They were either too old or too young to have caught Aids sexually. Since the CDC is doing a coverup and wishes to prevent possible panic, it unjustifiably refuses to accept Dr. Whiteside's facts. He is not a racist and loves blacks but dares to tell the truth about the casual transmission of Aids. Casual transmission means not by sex or blood transfusions, but by saliva, Aids cooks, etc.

Dr. Whiteside has speculated that multiple mosquito bites could be the cause of the Aids epidemic in Belle Glade or some other reason. Maybe so for blacks, but not for Whites. There are poor White people living in Belle Glade and the mosquitos like them better than negroids. Yet, the Aids plague in Belle Glade is only affecting the blacks and the Whites are still no part of the Aids epidemic. That is more proof that Whites have much immunity to Aids. Belle Glade is a good laboratory that proves that Aids is a racial disease of negroids. Praise God for protecting us White people!

The New York Times, page A-16, March 16, 1987 reported that the minority poor are at a disproportionate risk from Aids which is causing entire families to fall like dominoes. It says that those who work in minority neighborhoods are reluctant to broadcast data about Aids in racial terms because they fear a backlash. They fear that if the prevalence of Aids were publicly known that it would be one more reason to discriminate against blacks. Then, on the other hand, the Times article says that, "if we don't recognize that certain populations are more at risk than others, we will not provide resources to the right communities and we will use the wrong cultural idiom." The Times article says that in the afflicted communities, "some people wonder about the perceived silence from many black leaders" at a time when "whole communities are dying." The article also points out that lawyers, politicians, bankers and others are dying from Aids, but neglects to mention the high percentage of jews among them. From reading that full page Times article about Aids, one could easily come to the conclusion that New York may cease functioning by 1989.

If jews were not listed in the White statistics by the CDC, the sta-

tistics would show a much lower percentage of Whites with Aids.

The above-cited Times article mentioned about how some blacks in Harlem refer to Aids as "God's wrath." Yes, Aids is the wrath of God.

The Big Aids Cover-Up

The federal CDC definition of Aids is so narrow that most who die from Aids are not listed in AIDS statistics, but as deaths from Aids Related Complex, ARC. The CDC keeps no statistics on ARC, even though large numbers die from it. Without statistics, the CDC estimates that there are 5 to 10 times as many cases of ARC as AIDS. The Wall Street Joural of May 30, 1986 quoted that ratio which is too low. The more reliable Medical Laboratory Observer magazine of November 1985 estimated that there are "10 to 20 times more people with ARC than diagnosable AIDS." So, why the big coverup? Race is the obvious reason. Many more are dying from ARC than from AIDS and the percentage of negroids with ARC is undoubtedly even higher than negroids with AIDS. Otherwise, how could whole negroid communities be dying out?

The Wall Street Journal article mentioned above honestly admits that there is an under count of regular Aids cases because there is a tendency by some physicians not to report Aids cases to the CDC and even to omit

Aids from death certificates.

This brochure is a preview of a book about Aids, its racial nature and the big cover-up that this writer plans to finish researching and

writing with the hope of publishing it next year.
