

**NS**

BULLETIN

OFFICIAL INTERNAL ORGAN OF THE
National Socialist White Peoples Party AND THE **National Socialist Youth Movement**

No. 47

1 August, 1969 YF 80

At a time when one side, armed with all the weapons of a philosophy, a thousand times criminal though it may be, sets out to storm an existing order, the other side, now and forever can offer resistance only if it clads itself in the forms of a new faith, in our case a political one, and for a weak-kneed, cowardly defensive substitutes the battle cry of courageous and brutal attack. And so, if today our movement gets the witty reproach that it is working toward a 'revolution,' especially from the so-called national bourgeois ministers, say of the Bavarian Center, the only answer we can give one of political twerps is this: Yes, indeed, we are trying to make up for what you in your criminal stupidity failed to do. By the principles of your parliamentary cattle-trading, you helped to drag the nation into the abyss; but we, in the form of attack and by setting up a new philosophy of life and by fanatically and indomitably defending its principles, shall build for our people the steps on which it will some day climb back into the temple of freedom.

Mein Kampf, Vol. Two, Chap. I.

Have You Registered for Party Congress?

The time for the Party Congress is drawing urgently near. Any Party Member who has not yet registered to attend is asked to do so without further delay. Also, all official supporters in good standing are welcome to attend this historic meeting.

Motel accommodations are available at reasonable prices just a short distance from the Congress site. Anyone without money for a room will be provided with a place to unroll a sleeping bag. We want to be sure that no one misses the Congress because he is short of funds.

Because time to register is running out, we ask that you fill in and mail us the enclosed registration card with your \$2 fee (\$1 for students) *by air mail* without delay. We would like to have all delegates registered by August 15th at the latest. This will allow us just enough time to arrange transportation for those in need.

Mechanized Production Aids Propaganda Flow

The following pieces of production and mailing equipment acquired by the Party either new or used over the past months has greatly increased propaganda output. Each one of these pieces of equipment has been carefully selected for its capability of raising not only the quantity but also the quality of printed matter put out by the NSWPP. You may have noticed that the appearance of Party material has been gradually improving. This trend will continue as our staff becomes more adroit in the use of these excellent machines.

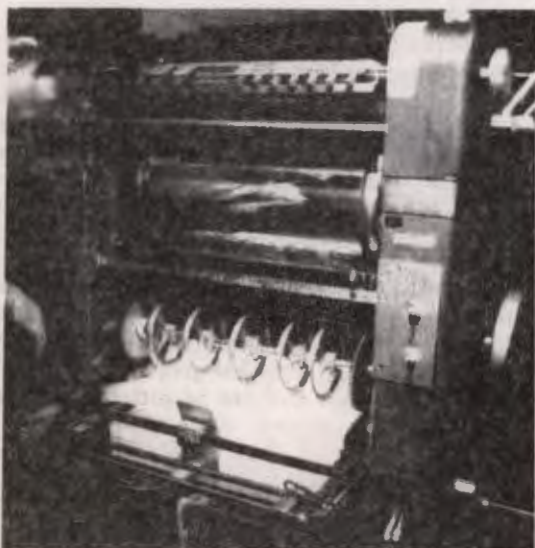

New Time-Saving Equipment Raises Output—Cuts Costs

This is a cold-type composing machine. Although it looks much like an ordinary typewriter, it does nearly the same job as a gigantic lino-type machine, which would fill up a whole room and require a highly trained technician to operate. This machine has the capability of setting justified copy, that is, setting parallel lines of type so that all lines are exactly the same length, like the lines of this paragraph. In addition, the type faces can be changed quickly and effortlessly to a multitude of type styles and sizes.

This is a headliner, a machine which sets the large headlines for Party literature. This machine automatically does the work in a few hours that used to take days of painstaking hand labor to accomplish. In minutes, the headliner can set a row of large letters in any type face or size required. Shown to the left of the headliner are some of the type faces and sizes which can be set by this machine.

This printing press is used to run off small brochures, leaflets and pamphlets. It was bought by the Party used at a fraction of the new price. This press is equipped with time- and labor-saving attachments which greatly increase its utility. It has a capability of printing both sides of a sheet of paper at once, something most presses can not do. With this machine, the Party can produce 50,000 leaflets, printed on both sides, in a day's time. Often it is kept rolling day and night.

This is a Graphotype machine, a component of the Party's automated mailing system. The Graphotype makes an address plate which is used in another machine to instantly address a piece of mail. The plates made by this machine resemble miniature license plates which contain your complete name and address. All of these plates are kept in a safe place under double lock.

This is the Addressograph machine which uses the plates made by Graphotype. In addition to instantly addressing letters, the plates used in this machine can be coded with pertinent data about each individual addressee. This enables the machine to automatically pick out any group within our list to which we want to make a mailing. For example, if we want to mail out the latest issue of the newspaper to all subscribers, the machine simply has to be set up to pick out the plates which are coded for "newspaper subscription paid." It will print only those and none others, and will put the address plates back into alphabetical order after it has finished. Since each address plate can be coded twenty-four different ways, each person has to have only one plate in the file even if he gets every mailing put out by the Party.

The NS Bulletin is mailed to you in an envelope addressed by the Addressograph machine.

Both the Graphotype machine and the Addressograph machine were purchased and are used by the Party at an amazingly inexpensive price.

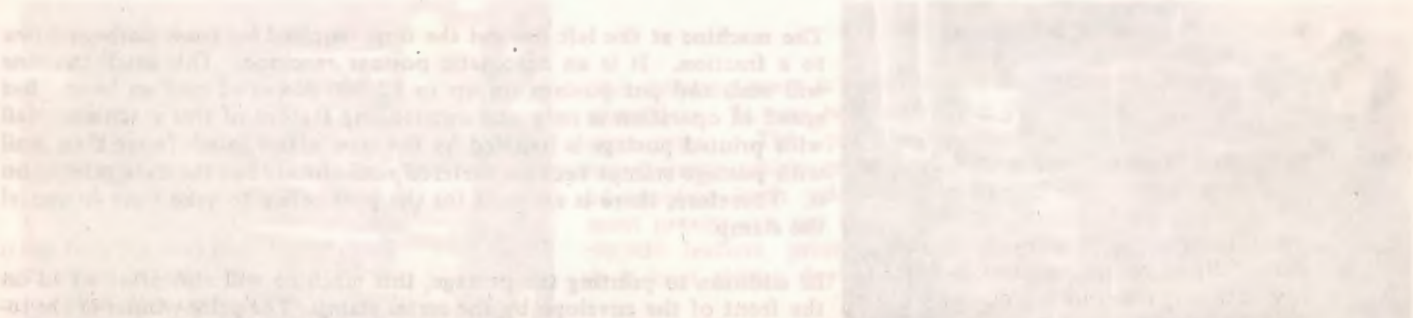

The machine at the left has cut the time required for mass mailings down to a fraction. It is an automatic postage machine. This small machine will seal, and put postage on up to 13,500 pieces of mail an hour. But speed of operation is only one outstanding feature of this machine. Mail with printed postage is handled by the post office much faster than mail with postage stamps because metered mail already has the date printed on it. Therefore, there is no need for the post office to take time to cancel the stamp.

In addition to printing the postage, this machine will also print an ad on the front of the envelope by the meter stamp. The prize-winner in the recent postage meter ad contest will soon be used with this machine. The amazing capacity for sealing and posting mail has greatly reduced the time required for preparing mailings. Now mail can be gotten out within just a few hours of the time it comes off the press.

Time Saving Equipment Raises Output—Cuts Costs

The machines pictured here have increased the Party's ability to produce top-quality publications in large quantities and get them into the mail to National Socialists all over the world in a fraction of the time it used to take. But these are only a sample of the machines which will be needed to keep up with the Party's output of literature in the next few years ahead. Each piece of machinery purchased by the Party has greatly increased our operating efficiency. As we begin to work with greater numbers of people, more and bigger machines will be needed to handle the load.
